### DETAILED ACTION

This action is in response to Amendments and remarks filed on April 28, 2005. Claims 2-5 are currently pending.

#### *Drawings*

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the parasitic capacitor of the photoelectric element, as recited in Claims 2 and 3, (which C in Fig. 1 cannot refer to, since C is defined as a parasitic capacitor consisting of the junction capacity plus wiring stray capacity, as defined by Applicant's specification in Page 2, lines 10-13) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will

Art Unit: 2878

be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### *Claim Objections*

2. Claims 2-4 are objected to because of the following informalities:

In Claims 2 and 4, line 4, "suing" should be replaced with "using".

In Claim 2, line 7, "a normal" should be replaced with "a normal value".

In Claim 3, line 9, "MSO" should be replaced with "MOS".

Appropriate correction is required.

### *Claim Rejections - 35 USC § 112*

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 2-5 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Applicant refers to a parasitic capacitor of the photoelectric element in Claims 2 and 3- however, the specification merely refers to a parasitic capacitance for the photoelectric element

Art Unit: 2878

and does not actually recite a specific embodiment of a *capacitor*. In fact, Applicant's specification at Page 2, lines 10-13 note such a capacitance as caused by a "*junction capacity plus wiring stray capacity*" and appears to actually teach away from an embodiment of an actual capacitor.

Claims 4 and 5 are indefinite by virtue of their dependency on an indefinite claim.

#### ***Allowable Subject Matter***

4. Claims 2-5 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 1st paragraph, set forth in this Office action.

5. The following is a statement of reasons for the indication of allowable subject matter:

The invention as claimed, specifically in combination with converting a produced current from a photoelectric converting element into a voltage signal by using a MOS type transistor with a *logarithmic* output characteristic in a *weak inverse state* and a voltage switching-over circuit for changing a *drain* voltage of each of the MOS type transistors for each of the pixels to a value *lower than a normal value for a specified time* to remove a charge accumulated in a parasitic *capacitor* of the photoelectric element before detecting a light signal from each pixel, is not disclosed or made obvious by the prior art of record.

#### ***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2878

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
